

OpenCities + Bookable Connector

Provide a seamless customer experience by making it easy to find events and purchase tickets, right from your OpenCities website!

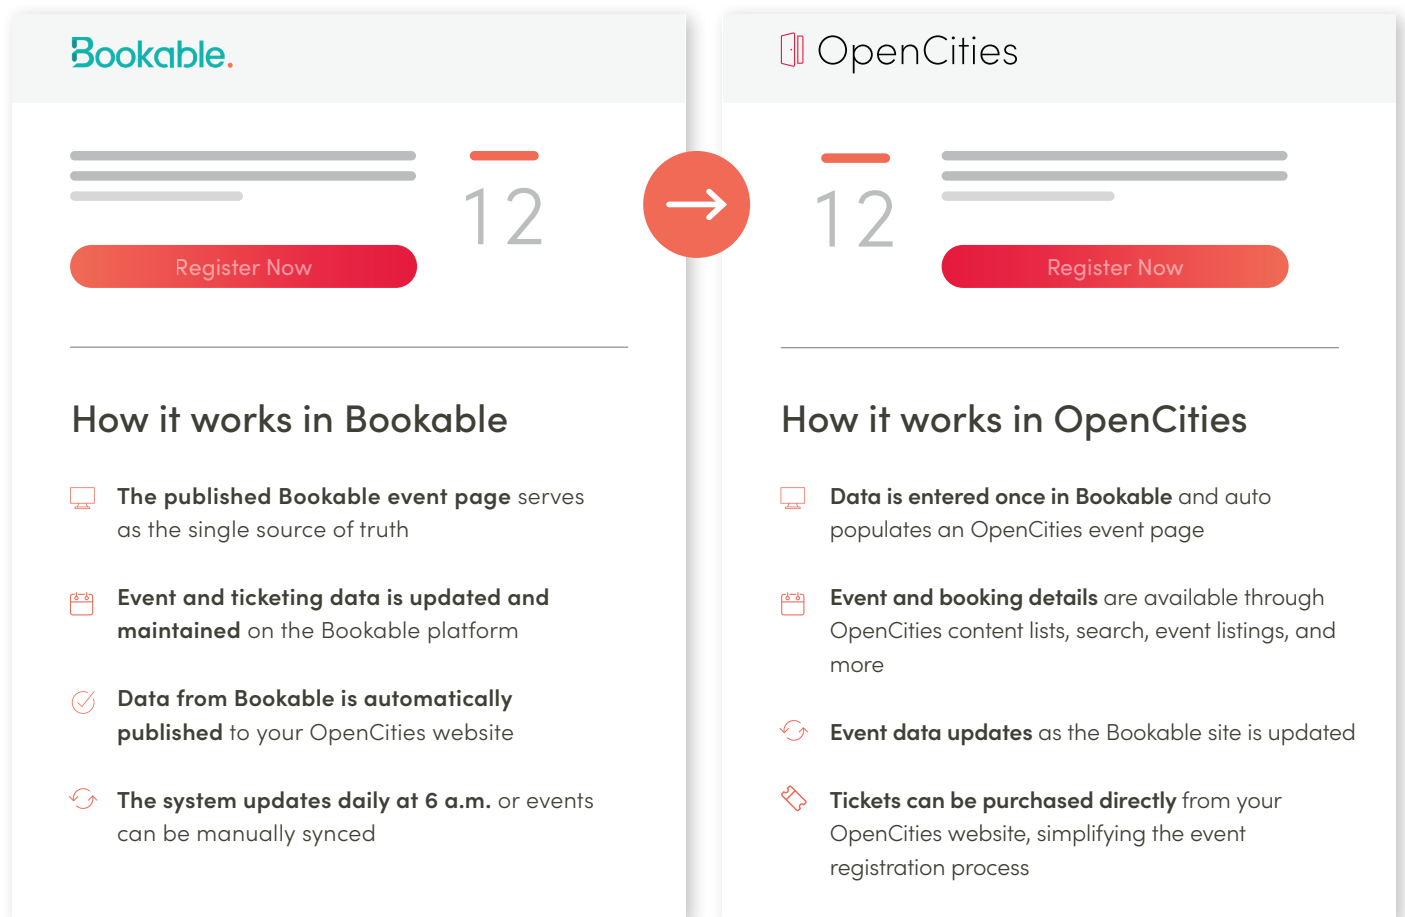

The Challenge

Councils are busy and it can be a challenge to meet growing community needs with limited time and resources. What if your organisation could save time and simplify the process of event booking and promotion?

What If You Could...

- ✓ **Connect website and event booking software** specifically built to meet the needs of government?
- ✓ **Automatically synchronise event information** and make it discoverable on your website homepage, event listings, maps, search, and My Neighborhood?
- ✓ **Make it easy for residents and visitors to find event information and purchase tickets** without having to leave your OpenCities website?
- ✓ **Have one central source of truth for event data** (Bookable) that automatically updates across connected platforms (your OpenCities website)?
- ✓ **Reduce the need** for additional data entry and the potential for errors or outdated information?

How does the connector work?

- 1. Event and ticketing information** is entered and published in the Bookable platform
- 2. Selected event and ticketing information** automatically synchronises and displays on your OpenCities website via API access
- 3. Bookable serves as the single source of truth for event content**, so information only needs to be maintained and updated in one platform

Implementation

The Bookable connector is activated by speaking to your Attekus contact and only takes days to be up and running.
